

Orpheus Privilege Amplifier 350W Mono

Privilege Amplifier 350W Mono is an innovative mono-bloc construction developed in collaboration with an internationally acclaimed designer. It has been built to the highest mechanical quality standards, with a casing created by specialist subcontractors from the Swiss "Watch Valley". The Amplifier has been crafted from a homogeneous 100 kg cast aluminium block and specifically processed to obtain a pure, unified and natural aluminium colour.

The Orpheus Privilege Mono Amplifier demonstrates the outcome of merging creative mechanical design with outstanding audio technologies. With a high quiescent current, Orpheus amplifiers combine the speed and authoritative deep bass of the most powerful transistor designs. Moreover the Amplifier has a midrange glow, smooth high frequencies and overall musical warmth of the finest tube designs. Housing this level of power and performance in such an elegant low-profile enclosure optimizes the Mono Amplifier's ultra-short signal path.

Features

- 350 W Amplifier Mono
- Class AB
- 1050VA total transformers power
- Balanced and Unbalanced Inputs
- Single-ended phono inputs and balanced XLR inputs
- Dual speaker terminals for bi-wiring (Three M monoblock)
- Efficient heat dissipation via internal chassis-coupled heatsinks
- Non-resonant heavy-gauge black powder-coated steel chassis
- Bridge amplifier topology on the load
- PowerLoop technology for a constant output power mode on the output stage
- Symetrical path from the single stage to the output stage
- Regulated power supplies for both input and output stages
- Capacitor mutliplier with an electronic equivalence of two Farads per power supply rail
- Possibility to chain the Power Amplifier
- Trigger Inputs
