

Orpheus Privilege Pre-Amplifier

Privilege Preamplifier is an innovative mono-bloc construction developed in collaboration with an internationally acclaimed designer. It has been built to the highest mechanical quality standards and with a casing created by specialized subcontractors from Swiss "Watch Valley". Moreover the Pre-Amplifier has been crafted from a homogeneous 100 kg cast aluminium block and processed specifically to obtain a unified shape and a pure and natural aluminium colour. The Orpheus Privilege Pre-Amplifier demonstrates the possibility of merging creative mechanical design with outstanding Audio technologies.

The electronic design of the Privilege Pre-Amplifier has been completely reviewed and improved. The engineers at Orpheus have only kept the basic principle behind the preamplifier, but all the rest, most significantly, the design has been entirely revised. The signal path is completely symmetrical which requires more components and increases the difficulty of development however, most significantly for the end user, it results in improved sound quality.

Features

- Internal Balanced Architecture
- Stereo
- DC level limited by analog feedback Loop
- Digital Volume control
- Intuitive menu-based operation
- Independent input level setting for each channel
- 100-step volume control in 0.5 dB increments
- 20-step relative level adjustment for each input in 0.5 dB increments
- User-selectable input names up to 10 characters
- Optical Incr. Encoder for a new intuitive control
- Channel balance control (+/- 10dB)
- Bypass option
- 4 trigger outputs each adjustable
- USB port
- Highest quality analog stage with audiophile components
- Inputs:
 - 4X Unbalanced
 - 2X Balanced
- Outputs:
 - 2X Unbalanced
 - 2X Balanced
